FOR IMMEDIATE RELEASE

July 09, 2009

Manassas, Virginia. Integrated Digital Systems/ScanAmerica, Inc. (IDS), announced today the change of name and new features prior to official release for its portable patient records USB key product to MedDocs Key™ Secure Portable Electronic Patient Health Information Application to announce the addition of MedSync™ option that will synchronize MedDocs Key™ with secure health information networks, portals and MedDocs™ for compliant patient records management and back-up. For the past three years the new Microsoft .NET version of MedDoc's Patient Records Management System to replace the previous version product has been in development and design. The primary objective was to develop a rugged, portable, zero foot print, open solution that would give patients control of their medical records and at the same time provide Healthcare providers the ability to share the data with their patients and update the data on MedDocs Key™. Whether you are just a citizen, a reservist, a career military or retired individual MedDocs Key™ provides the security and peace of mind that you have immediate access and control of your medical data and records. Larry Hunt, CEO of Integrated Digital Systems, today presented several real world applications of MedDocs Key™ and scenario's stating the following:

Imagine

- Being able to walk into a new physician's office, hand them your MedDocs Key™ and provide your complete medical/health history and leave with your records updated for the latest visit and new physician information.
- Going to your Physician to get a prescription refilled and then handing the pharmacist your MedDocs Key™ to validate and fill your prescription.
- Being able to securely carry your complete documented medical history with medical record images, film and x-rays anywhere in the world.
- Being in an accident, in a strange place and having your medication information, physician information, immunization record and medical history immediately available to a first responder or a member of an Emergency Room at a critical point.
- Knowing your health data and images are secured utilizing two or three levels of security available with MedDocs Key™.
- Knowing your family medical history is under your control and always available to you in an emergency.
- You are in a hospital, unconscious and the nurse was about to give you a shot to which you are severely allergic and it would have caused severe medical trauma or death if she had not checked and acquired your

override code for MedDocs Key™ from your Medical Plan provider.

- Your unsecured paper, CD, DVD, SD Card or USB Key that you were given with your medical records is lost or stolen.
- Not having to worry about the records you lost and being able to purchase a new drive and with MedDocs Key Sync connect to a MedDocs Key authorized PHI registration service or your Medical Plan Provider, to recover all your lost medical records.

These are all scenario's that with MedDocs Key™ can play out daily, prevent errors, save lives and reduce healthcare cost. MedDocs Key™ is a zero foot print application that runs presently on an encrypted rugged USB flash drive ranging from 8-32GB, is completely stand-a-lone, and provides various levels of encryption and biometric access security in addition to ID and Password protection. MedDocs Key™ not only stores and manages the patient's critical medical data but also stores and provides the ability to view the patient's data, charts, prescriptions, x-rays, film and other critical records, through the document and DICOM viewer built into MedDocs Key™. MedDocs Key™ provides eight (8) information tabs for patient data, patient records viewing, 2009 ICD-9 Code automatic look-up for spelling and selection when selecting the correct medication, condition and procedure, required data fields, and more. The patient medical data include tabs for:

1. Patient Details
2. Insurance
3. Medications
4. Emergency Contacts
5. Healthcare Provider List
6. Medical Conditions
7. Patient Medical Records
8. Immunizations /Allergy History

MedDocs Key™ provides the patient and healthcare provider the ability to add and update records by merely dragging and dropping them on to the MedDocs Key™ Graphical User Interface (GUI).

MedDocs Key™ software is currently available with several secure, encrypted, rugged USB key configurations ranging from 4Gb to 32 GB storage .

Note: Versions of this product will be available for business, training and personnel records in the near future for commercial and government application of this technology for handling and transporting sensitive and classified data and electronic documents. These versions will also provide a synchronization application (EdgeSync) that will work with IDS EDMS products and be Windows 7 Certified.
